Lancaster

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001).

There are a number of reasons for this increase. First, the world population has increased from 5 billion in 1987 to 6 billion in 2000, and is projected to reach 9 billion by 2050 (UN 2000). Second, the world population is becoming increasingly urbanized, and this has led to a decline in the number of people engaged in agriculture. Third, the world population is becoming increasingly aged, and this has led to a decline in the number of people engaged in agriculture. Fourth, the world population is becoming increasingly dependent on food imports, and this has led to a decline in the number of people engaged in agriculture.

There are a number of reasons for this increase. First, the world population has increased from 5 billion in 1987 to 6 billion in 2000, and is projected to reach 9 billion by 2050 (UN 2000).
